

PatienTree, Inc. and Qualilife have entered into a Strategic Partnership to deliver “Quality of Life” software solutions to the US Markets.

FEBRUARY 12, 2006, TAMPA, FLORIDA: *PatienTree a “Point of Care Software and Solutions” development and delivery company has announced the signing of a definitive agreement to represent the suite of software products and accessibility solutions from Qualilife, a Switzerland based Technology Company, here in the US. PatienTree founder and President, Bob Letzeisen, proclaimed, “The Power to Care from Anywhere” has just been expanded and is now “The Power to Care and Communicate from Anywhere, by Anyone!”*

“Our business model is about changing people’s lives and environments in the worse of circumstances. Having personally been in the position whereby I could not have interacted with a computer by normal means, this partnership has great meaning for me. This is a passion, not a job. Qualilife products offer the most intuitive and accessible interfaces to interact with our software platform. Now all ages, and anyone regardless of their learning or physical abilities can interact with our products. But as importantly, this partnership empowers PatienTree to offer the Qualilife complete software portfolio, built from the ground up to accommodate users who may be challenged by the things you and I take for granted, such as typing, Web Surfing, Sending Email, making phone calls, or even traveling to historic sites. Standard and common PC functions are now delivered and enabled through the Qualilife interface engine of accessibility.”

Both PatienTree and Qualilife are built on and certified by Microsoft in the XP operating system. This furthers the partnership’s ability to provide easy too use, secure and robust software platforms which fit into the new age healthcare enterprise. The Qualilife enabled interface for PatienTree and the Qualilife developed software portfolio will be extremely attractive to Hospitals, clinics, and geriatric care facilities of all kinds. Rehabilitation, Children’s, Acute Care, Geriatric Care, Nursing Homes, and special education will benefit from the Qualilife accessibility tools and applications.

“We couldn’t be more pleased to be partners with the company, staff and products of Qualilife. We share each others passion for healthcare and accessibility solutions. The “Point of Care” transformation is destined to occur and we intend to lead the way” said Mr. Letzeisen. He further stated “Our 2006 HIMSS booth #7224 is the perfect venue for us to introduce and demonstrate this unique and powerful interface with unsurpassed accessibility options now being delivered by PatienTree and the Qualilife teams. I am confident that the American Disabilities Act, the Veterans Administration, US 508 initiatives, State driven Departments of Aging, as well as the US Department of Health and Human Services will all realize tremendous benefits from our enhanced platform.”

Claudio Giugliemma, CEO of Qualilife stated “This is a wonderful opportunity for both parties to further patient education, extend the reach of healthcare digital information, while dynamically opening the world to patient initiated services for everyone. We are extremely pleased and excited about this partnership and the new opportunities it brings to all patient profiles, especially for those who want and need it the most. This solution supports and fits so well with State and Federal long term care and communication initiatives that have been championed by the ADA and the US Government. The longer term patient, children, and the disabled should not be without opportunities to participate in the digital world, especially when it involves healthcare! The combination of Qualilife award winning technology with the robust PatienTree offering will provide the catalyst for quicker adoption of point of care and communications technologies.”
