

## “The Power To Care From Anywhere”

PatienTree Incorporated introduces their integrated patientside “Point of Communications and Entertainment” product suite. After a half of decade in development, testing, and market research, and only after receiving Microsoft certification, PatienTree now offers a cadre of products focused on the transformation of healthcare designed to embody the Information Rich Consumer Driven model and directives documented in the Presidential HIT report.

There is a tremendous need for information tools that are designed for use in the delivery of digital data within the healthcare industry. It is paramount for physicians and clinicians to have electronic access to the latest available data. With the proper tools staff will have access to medical records, medication history, radiographs, and lab results. And our E-prescription solution helps to eliminate handwriting interpretation errors, and, when integrated into hospital drug interaction and patient record software, it can automatically check for the correct doses, allergies, and potential adverse effects.

The PatienTree solution assists with the:

- ✓ Reduction of medical errors
- ✓ Reduction in care variability
- ✓ Improved uses of medical resources
- ✓ Promotion of public health and procedures
- ✓ Strengthening of privacy and data protection
- ✓ Secured Real Time Access to HIS's from the Point of Care or Remote Location

All of this medical technology improves patient safety and the quality and continuity of care.

It is also critical to each patient's health that they are given the opportunity to participate in their own care, and communicate to the outside world with access to health information research. At PatienTree, we provide information tools for better patient outcomes.

The PatienTree solution offers:

- ✓ Personalized web portal
- ✓ Voice Activated Nurse Call
- ✓ Staff Access to medical information
- ✓ Signature Capture and Image Upon Input
- ✓ Secured Remote visitation via video camera
- ✓ Food Services, Gift Shop, Birth Announcements
- ✓ Patient Satisfaction Survey with Real Time Alerts
- ✓ Education content delivery and testing for recovery and post-recovery
- ✓ Patient/Family Bedside entertainment such as games, digital radio, TV, etc

In conclusion, PatienTree provides the state of the art monitoring systems and customized software that delivers better healthcare that is higher in quality, safer for the patient, and more efficient overall. The PatienTree transformation platform is built on an open .Net™ architecture, certified for Microsoft XP™, and allows for easy integration with today's hospital information systems. Our work Flow digital writing solution offers an HL-7 framework to support direct or EAI integration.
